

S. R. Leland & Son Eclipse Cornets

Worcester, Massachusetts

1886 – 1908

#150 (auction photos)

#160 (author's collection)

#272 (auction photos)

#308 (auction photo)

#363 (auction photos)

#459 (auction photos)

#520 (auction photos), only one found with Bb/A valve

#524 (auction photos)

#536 (author's photos)

#543 (author's photos)

#552 (author's photos); this must have been a special presentation cornet as it is the most elaborately engraved of all the Leland horns; the design seems to combine the 22 years of production with the early ivy pattern engraving (1880s), #552 serial number (c.1896), and second serial #840 (c.1906), which matches with the newer style finger buttons, may mean that this was returned to the factory

#608 (auction photos)

#625 (auction photos); I had the same leather case with another Eclipse cornet but it was too far gone to save; this is an example of the "New 1897" design

#694 (auction photo) matching the Clement model direct air passage ad from 1904

ECLIPSE CLEMET MODEL. See the Direct Air Passage

Chorus and instrumentalists are lured by
Lending Pleasure on their
Instruments; they say they are
Perfect, and that our
System of milling is easy, and that our
Extensive should be recognized.

#740 (author's photos)

#760 (author's photos); the only Rex model I have seen

#807 (author's photos); only Simplex model found

#846 (author's photos)

#860 (author's photos); the only Eb found; I am showing this in numerical order but the style would suggest this was made at the same time as Bb models in the 500-600 range c.1896

#901 (author's photos)

#928 (auction photos); the first to add "Trademark" on the bell c.1901

#931 (author's photos); complete with case, high & low pitch slides & mute

#955 (author's photos); a rare plain brass finish

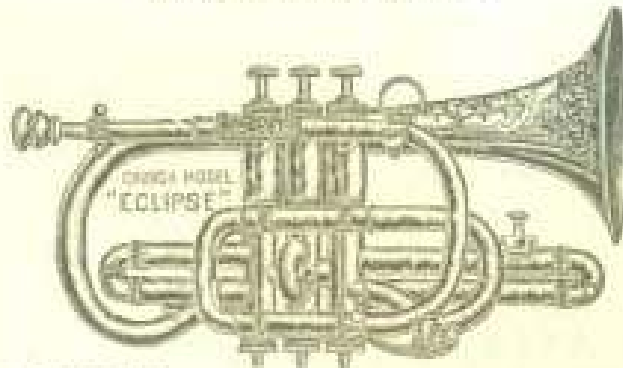

#978 (auction photos); the highest number found so far; similar to the Rex model but the only fixed lead pipe model found; the serial number has moved to the bell engraving
